

## API Resellers - Changelogs

### Version 4.2.4

- From now on, the Greek Registry also supports **.ελ domains**.

### Version 4.2.3

- The field "title" has been added at **changeregistrar** function for .eu domains.
- Whois Results (change due to GDPR): Owner's details do not appear, accordingly to the registry.

### Version 4.2.2.

- The code for API calls in the Test Environment has been updated, so as to be synchronized with the code for API calls in the Live Environment.
- Some of the commands that are supported in Live Environment, are not supported in Test Environment. These API calls (commands) are the following :

**Domain Change Owner** (changeOwner),  
**Transfer Domain** (changeregistrar),  
**Whois** (whois),  
**Send authorization code** (getauthocode),  
**Set AutoRenew Function** (setautorenew),  
**Enable Webhosting** (createhosting),  
**Manage DS Records (DnsSec)** (managednssec)  
**DnsSec Information** (dnssecinfo).

- Fix update for the command **savecontactdetails**, in the case of saving data for the admin / tech contact, and also in the case of updating contact data when the fullname is not being changed.
- Fix update for the command **savecontactdetails**, in the case of creating a new contact at the GR registry, where the fax was not being saved.
- Domain Autorenew information (whether it is enabled or not) has been added (field: autoRenewStatus) at **getDomainInfo** response.
- Validation check about the authorizationCode at **domainregister** command, in order to accept only valid content, otherwise an appropriate message appears at response.
- Validation checks have been added about the data inserted for a contact, at **domainregister** and **savecontactdetails** command. In case of invalid data, the appropriate messages appear at the response, according to the case.
