

Papaki.gr API

Specification & Documentation

1.Changes Log

Version 4.2.1. Date 13-08-2014

- ▲ Extra attributes added at section 5.2
- △ Asynchronous added at section <u>5.3</u>
- ▲ Cabe added at section 5.4

Version 4.1.1 Date 12-06-2014

- managednssec function added at section 4.24
- ▲ Tag hasDsRecords added at "getnameservers" at section 4.2
- △ Tag dsrecords added at"getnameservers" at section 4.2

Version 4.1 Date 31-10-2013

△ Optional Field check24hours added at function "domainupdate" at section 4.4

Version 4, Date 23-05-2013

- △ AutoRenew function added at section 4.13
- *Register NameServer" function added at section 4.14
- ♠ "Modify NameServer" function added at section 4.15
- △ "Delete NameServer" function added at section 4.16
- ▲ "Domain Change Owner" function added at section 4.17
- △ "Delete Domain" function added at section 4.18
- "checkphonevalid" function added at section 4.19
- ♠ "checknameserver" function added at section 4.20
- "getdomaininfo" function added at section 4.21
- "Multi Modify Nameserver" function added at section 4.22
- "uniqueid" added at response of the function "domainregister"
- △ Optional field AutoRenew added at function "domainregister"
- Optional field AuthCode added at function "domainregister"
- A Removed Fields "username", "password" at all functions
- ▲ At section 4.11 action value "reglock" replaced to "setDomainlock"
- At section 4.10 action value "getregistrarlock" replaced to "getDomainlock"

- △ Changes at "savecontactdetails" function. See Notes at section 4.7
- Added admin/tech contact details at "domainregister" at section 4.1

2. Introduction

Welcome to the Papaki API guide for the registration and management of domain names and domain related services. This document is intended for Papaki Resellers who offer domains and supporting services to their customers.

Using this document, you can provide Papaki functionality to your customers by integrating the API commands into your website that can send JSON encoded object to Papaki over HTTPS. You can also use the API commands to run queries or automate tasks you would otherwise perform manually using the Papaki Control Panel.

3. Using the API

3.1. Request/Response Messages

The Partner makes a request to the API and the API returns with a response. The process returns a response message to a client in answer to an action that was executed on its behalf. Responses contain data appropriate for the action that was executed. In some cases, this may be simple strings; in other cases, this may be lists of information. The response might also contain errors, in that case your request is not executed.

3.2. Connecting with the API

Connecting to the API is done with Http post sending JSON Objects.

Json Requests are sent to https://api.papaki.com/register_url2.aspx

3.3. How to order a domain name

Ordering a domain name requires a couple of steps.

- a) Check the if the domain is available with sending Json for Domain Search, if response code is 1000 proceed.
- b) Order the domain name sending Json for Domain Registration , and specify the Name Servers if needed.

4. Web Service Details

4.1. Domain Registration

Notes:

For .GR, .COM.GR, NET.GR, ORG.GR, EDU.GR **domains** you can set admin or/and contact details at registration

Admin contact details and tech Contact details are optional.

If you want to set Admin and / or Contact details, for .gr domains, include the specific json tags .

For COM, .NET, .INFO, .ORG, .MOBI, .LA, .NAME, .CC, .AC, .IO, .SH, .TV, .BZ, .WS, .MS, .GS, .IN , .FM. **domains** , tech contact is the same as registrant contact, and admin contact is filled with

a) **JSON request**

Example1

```
"request": {

c) Response example

```
{
    "response": {
        "code": "1000",
        "message": "Message",
        "expirationdate": "27/6/2014 11:59:05 μμ",
        "uniqueid": "d12345"
    }
}
```

d) Response Codes

1000 - Command Completed Succesfully

140 - Not affiliate previledges

140 - Unauthorized access

20 - Error in customer details

130 - Error in owner details

30 - There are no available credits

50 - The domain is not available

180 - The Registration period is not valid

170 - The extension of the domain is not valid

60 - Connection to EPP problem. Check contact details

90 - Domain name missing

```
100 - Description for domain missing
80 - Unexpected error
200 - You can not edit these nameservers. The registration was not completed. Please try again
1333 - Warning: There was a problem with the nameservers. + nameservercode + + nameservermessage
40 - Connection error to database
```

4.2. **Get Nameservers a) JSON Request**

```
{
    "request": {
      "do": "getnameservers",
      "apiKey": "myapikey",
      "domainname": "mydomainname.gr"
    }
}
```

b) Parameters:

domainname a valid API Key for your user account domainname Domainname in your account at papaki.gr

do Value:getnameservers

c) Response example

Notes:

If registered nameservers exist they will be returned at the json response as ownnameservers

ns1,ns2,ns3,ns4 are the nameservers linked to the domain

```
Example 1 {
    "response": {
```

```
"code": "1000",
    "message": "Message",
    "ns1": "ns1.testserver.gr",
    "ns2": "",
    "ns3": "",
    "ns4": "",
    "ownNameservers1": "ns1.mydomainname.gr",
    "ownNameservers2": "ns2.mydomainname.gr",
    "ownNameserversLength": "2",
    "hasDsRecords": "False",
    "dsrecords": []
  }
}
Example 2
{
  "response": {
    "code": "1000",
    "message": "Message",
    "ns1": "ns1.testserver.gr",
    "ns2": "",
    "ns3": "".
    "ns4": "",
    "ownNameservers1": "ns1.mydomainname.gr",
    "ownNameservers2": "ns2.mydomainname.gr",
    "ownNameserversLength": "2",
    "hasDsRecords": "True",
    "dsrecords": [
      {
         "keyTag": "21111",
        "alg": "5",
         "digest": "",
         "publicKey":
1111111111111111FzNZPtq5JJ5f4h9DblQA7/lbHG0dRA7250IJk1/afCBXrAI2
FFPJdEcF9tgE4rWQiqpg2HZWCVmvYlhBi33M348zkpNksqyQlp6OSlwkRAW7J
11111111111111"
      }
    ]
 }
```

d) Response Codes

1000 - Command Completed Succesfully 120 - Check the Details you enter 140 $\dot{\eta}$ 150 $\dot{\eta}$ 160 - Not affiliate previledges 170 - Connection Error

4.3. Set Nameservers a) JSON request "request": { "do": "editnameservers", "lang": "el", "apiKey": "myapikey", "domainname": "mydomainname.gr", "NameServers": { "v4": [{ "Name": "ns1.mydomain.gr", "Ip": "78.12.23.127" **}**, "Name": "ns2.mydomain.gr", "Ip": "78.12.23.128"] } }

apiKey a valid API Key for your user account

domainname Domainname in your account at

papaki.gr

NameServers Give 1 to 4 valid nameservers

do Value: editnameservers

c) Response example

```
{
    "response": {
        "code": "1000",
        "message": "Message"
    }
}
```

d) Response Codes

1000 - Command Completed Succesfully

140 - Not affiliate previledges

140 - Unauthorized access

190 - Error in changing ips for nameservers

200 - NameServer Not Exists

210 - Editing NameServer Error

220 - Error Updatng Name Server

230 - Error Creating Host

240 - Updating Name Server Error

160, 170 - You hane no priviledges for this domain

180 - Check your details

40 - Connection to database problem

60 - Connection to EPP problem. Check contact details

80 - Not valid extension

90 - Domain name missing

80 - Unexpected error

4.4. Renew domain

The domain should not be under EETT approvement.

```
a) JSON request
{
    "request": {
        "do": "domainupdate",
        "customer_language": "gr",
        "apiKey": "myapikey",
        "domainname": "mydomainname.gr",
        "regperiod": "2",
        "idprotect": "false"
    }
}
```

b) Parameters:

apiKey a valid API Key for your user account

domainname Domainname in your account at

papaki.gr

regperiod Number of renewal years

idprotect Renew whois protection too (only if it is true or false

already whois protected)

do Value: domainupdate

check24hours Optional. When it is True prevents Value: "True", "False"

multiple renewals between 24 hours Default:"True"

c) Response example

d) Response codes

1000 - Command Completed Succesfully

- 140 Not affiliate previledges
- 210 The domain cannot be renewed. Be sure 365 days passed and the domain is valid.
- 140 Unauthorized access
- 20 Error in customer details
- 130 Error in owner details
- 30 There are no available credits
- 40 -Connection to database problem
- 50 The domain is not available
- 170 The extension of the domain is not valid
- 180 The domain does not belong to the customer
- 190 Error at updating period
- 60 Connection to EPP problem. Check contact details
- 90 Domain name missing
- 210 Error: Failed updating from quarantine
- 220 Error: Failed reactivating domain from guarantine
- 230 Error: Not supported update from quarantine for com and net domains
- 80 Unexpected error
- 240 Domain status (under EETT approvement) prohibits operation

4.5. Transfer Domain

```
a) JSON request
"request": {
"do": "changeregistrar",
"apiKey": "myapikey",
"domainname": "mydomainname.gr",
"customer language": "gr",
"authcode": "12345",
"RegistrantContact": {
        "firstname": "Registr. Firstname ",
        "lastname": "Registr. Lastname '
        "fullname": "Registr. Fullname ",
        "email": "email@email.com",
        "address": "Registr. address ",
        "state": "Registr. state ",
        "city": "Registr. City ",
        "postcode": "11111",
        "country": "GR",
        "phone": "+30.2102323233",
        "fax": "+30.2"
```

} } }

b) Parameters:

apiKey a valid API Key for your user

account

domainname Domainname in your account

at papaki.gr

authcode Authorization Code

do Value: changeregistrar

c) Response example

```
{
    "response": {
        "code": "1000",
        "message": "Message"
    }
}
```

d) Πιθανά Response codes και messages

1000 - Command Completed Succesfully

140 - Unauthorized access

180 - Change Registrar for this domain not completed

150 - Check the xml elements that you entered.

160 - Check customer details

50 - There is already another request for this DomainName

120 - Check your xml elements

20 - Error in customer details

30 - There are no available credits

40 - Connection to database problem

60 - Connection to EPP problem. Check contact details

90 - Domain name missing

80 - Unexpected error

4.6. Get contacts

a) JSON request

```
{
    "request": {
        "do": "getcontactdetails",
        "apiKey": "myapikey",
        "domainname": "mydomainname.gr"
    }
}
```

apiKey a valid API Key for your user account

domainname Domainname in your account at

papaki.gr

do Value: getcontactdetails

130 - Check the Details you enter

140 - Not affiliate previledges

170 - Connection Error

240 - Domain status (under EETT approvement) prohibits operation

e)Notes

- ▲ If you don 't want to change tech and/or admin contact details leave the fields empty
- For .gr domains If you send tech and/or admin contact details and the contact does not exist at registry , new contacts will be created
- ▲ For .gr domains you cannot edit the fields RegistrantFullname, Registrantfirstname, Registrantlastname and the values will be

ignored if you send them. If you want to change them see "Domain Change Owner" function at section 4.17

```
4.8. Domain Search

a) JSON request
{
    "request": {
        "apiKey": "myapikey",
        "type": "domainSearch",
        "lang": "el",
        "domain": "google2",
        "extensions": {
        "ext": [
        ".gr",
        ".eu"
        ]
      }
    }
```

b) Parameters:

apiKey a valid API Key for your user account

domain Without tld

type Value: domainSearch

extensions .COM, .EU, .NET, .INFO,

.ORG, .MOBI, .LA, .NAME, .CC, .AC, .IO, .SH, .TV, .BZ, .WS, .MS, .GS, .IN , .FM, .CO.UK, .ME.UK, .ORG.UK, .GR,

.COM.GR, .NET.GR, .ORG.GR,

.GOV.GR, .EDU.GR

c) Response example

```
{
    "response": {
        "code": "1000",
        "message": "Command completed successfully",
        "availabledomains": {
            "domain": "google2.gr"
        },
        "notavailabledomains": {
            "domain": "google2.eu"
        }
    }
}
```

4.9. **Whois**

```
a) JSON request
{
    "request": {
        "apikey": "myapikey",
        "type": "whois",
        "lang": "el",
        "domain": "onedomain.gr"
    }
}
```

apiKey

a valid API Key for your user account

domain

type Value: whois

c) Response example

```
{
    "response": {
        "code": "1000",
        "message": "Message",
        "whoisReply": "Whois Message"
    }
}
```

4.10. Get Domain Lock Status

```
a) JSON request
{
"request": {
"do": "getDomainlock",
"apiKey": "myapikey",
"domainname": "testdomain.com",
"customer_language": "gr"
}
}
```

b) Parameters:

apiKey

a valid API Key for your user account

domainname

Domainname in your account at

papaki.gr

do Value: getDomainlock

c) Response example

```
{
    "response": {
        "code": "1000",
        "message": "Message",
        "lock_state": "True"
    }
}
```

4.11. Set Domain Lock a) JSON Request

```
{
"request": {
"do": "setDomainlock",
"apiKey": "myapikey",
"domainname": ".",
"customer_language": "gr",
"locktype": "disable"
}
}
```

b) Parameters:

apiKey

a valid API Key for your user account

domainname

Domainname in your account at

papaki.gr

do

locktype

Value: setDomainlock

"disable" or "enable"

c) Response example

```
{
    "response": {
        "code": "1000",
        "message": "Message"
    }
}
```

4.12. Send authorization code a) JSON request

```
{
"request": {
"do": "getauthocode",
"apiKey": "myapikey",
"domainname": "mydomainname.gr"
}
}
```

apiKey

a valid API Key for your user account

domainname

Domainname in your account at

papaki.gr

do

Value: getauthocode

c) Response

```
{
    "response": {
        "code": "1000",
        "message": "Message"
    }
}
```

4.13. **Set AutoRenew Function**

```
a) JSON request \{
```

```
"request": {
  "do": "setautorenew",
  "apiKey": "myapikey",
  "uniqueid": "d12345",
  "autorenew": "False"
  }
}
```

b) **Parameters:**

do Τιμή:

apiKey a valid API Key for your user

account

uniqueid

Returned at Registration

autorenew

"True" for enable, "False" for disable

```
c) Response
{
"response": {
"code": "1000",
"message": "Command Completed Successfully",
"newAutoRenewStatus": "False",
"oldAutoRenewStatus": "False"
}
}
```

4.14. Register NameServer

```
a) JSON request
{
  "request": {
    "apiKey": "12345",
    "do": "registerns",
    "ip_address": "78.12.23.128",
    "ip_type": "v4",
    "name_server": "ns2.testdomain.gr"
    }
}
```

b) **Parameters:**

do Value:registerns

apiKey

a valid API Key for your user account

domainnameDomainname in your account at papaki.gr

name_server

ip_type "v4" or "v6"

ip_address Valid ip address i.e. "78.12.23.128" i.e.2: ""

```
c) Response
{
"response": {
"code": "1000",
"message": "Command Completed Successfully"
}
}
```

4.15. Modify Nameserver

```
a) JSON request
{
    "request": {
        "apiKey": "12345",
        "do": "modifyns",
        "oldip": "78.12.23.128",
        "newip": "78.12.23.129",
        "name_server": "ns2.testdomain.gr"
    }
}
```

b) **Parameters:**

do Value: modifyns

apiKey a valid API Key for your user

account

domainname Domainname in your

account at papaki.gr

name_server

oldip Valid existing ip address of

nameserver

newip I.e. "78.12.23.128"

```
c) Response
{
"response": {
"code": "1000",
"message": "Command Completed Successfully"
}
}
```

4.16. **Delete Nameserver**

```
a) JSON request
{
    "request": {
        "apiKey": "12345",
        "do": "deletens",
        "name_server": "ns2.testdomain.gr"
    }
}
```

b) **Parameters:**

do Value: deletens

apiKey a valid API Key for your user

account

domainname Domainname in your

account at papaki.gr

name_server Ends with domainname

```
c) Response {
"response": {
```

```
"code": "1000",
"message": "Command Completed Successfully"
}
}
```

4.17. **Domain Change Owner**

It can be used only for .gr domains.

You can see the costs at http://www.papaki.gr/en/domain-names-price-list.htm

```
a) JSON request
{
   "request": {
    "do": "changeOwner",
    "domainname": "testdomain123r.gr",
    "apiKey": "myapikey",
    "new_contact": {
          "fullname": "new fullaname",
          "firstname": "new firstname",
          "lastname": "new lastname",
          "email": "email@hotmail.com",
          "address": "new address",
          "state": "new state",
          "city": "new city",
          "postcode": "49084",
          "country": "GR",
          "phone": "+30.6956111111",
          "fax": "+30.2105555555"
          }
  }
}
```

b) Parameters:

do Value: changeOwner

apiKey a valid API Key for your user

account

domainname Domainname in your

account at papaki.gr

new_contactIncludes the contact details

of the new Owner

fullname New Registrant Fullname 3 to 64 alphanumeric

characters

firstname New Registrant firstname 3 to 64 alphanumeric

characters

lastname New Registrant lastname 3 to 64 alphanumeric

characters

email New Registrant email Maximum 64 characters to

left of and 63 characters

right of "@" sign,

alphanumeric characters,

validated

according to rfc822.

address New Registrant address 3 to 64 alphanumeric

characters

state New Registrant state 3 to 32 alphanumeric

characters

city New Registrant city 3 to 64 alphanumeric

characters

postcode New Registrant postcode 3 to 16 alphanumeric

characters

country New Registrant country i.e. GB , 2 characters,

http://isocountrycodes.net/

+CCC.NNNNNNNNN

phone New Registrant phone +CCC.NNNNNNNNN

fax New Registrant fax

(optional)

c) Response

```
pdfurl and requestid is returned only if code is "1000"
```

```
"response": {
"code": "1000",
```

"requestid": "3000"

[&]quot;message": "Command Completed Successfully",

[&]quot;pdfurl": "https://api.papaki.com/downloadurl.aspx?",

```
}
```

d) Response codes

1000 - Command Completed Succesfully

4000 - Not validated: ApiKey Missing

4000 - Not validated. Invalid Credentials or No permission from IP:...

600 - Unexpected exception

400 - Authentication Error

401 - Domain Status prohibits operation

189 - Contact Validation Error, Check contact details

500 - Process not completed

300 - Invalid tld

1100 - Request Message not valid

4.18. **Delete Domain**

It can be used **only** for .gr domains.

This functions deletes permanently the domain from Registry.

If the domain is not approved by EETT then credits will be refunded to your Reseller account and "CreditsAdded" will be returned "True" at Response.

```
a) JSON Request
{
"request": {
  "do": "deletedomain",
  "apiKey": "myapikey",
  "domainname": "testdomain123s.gr",
  "uniqueid": "d12345"
}
```

b) **Parameters:**

do Value: deletedomain

apiKey a valid API Key for your user

account

domainname in your

account at papaki.gr

uniqueid Returned at Registration

Order

```
c) Response
{
"response": {
"code": "1000",
"message": "Command Completed Successfully",
"CreditsAdded": "True"
}
}
```

d) Response codes

1000 - Command Completed Succesfully

4000 - Not validated: ApiKey Missing

4000 - Not validated. Invalid Credentials or No permission from IP:...

400 - Authentication Error

200 - Error Deleting domain

300 - Only .gr domains can be deleted

1100 - Request Message not valid

4.19. checkphonevalid

Checks if a phone number or fax number is valid

a) <u>Json Request</u>

```
{
"request": {
  "do": "checkphonevalid",
  "apiKey": "12345",
  "phone": "+30.2645097373"
}
}
```

b) Parameters:

do Value: checkphonevalid

apiKey a valid API Key for your user

phone +CCC.NNNNNNNN

```
c) Response
{
"response": {
"code": "1000",
"message": "Command Completed Successfully"
}
}
```

d) Response codes

1000 - Command Completed Succesfully

4000 - Not validated: ApiKey Missing

4000 - Not validated. Invalid Credentials or No permission from IP:...

1100 - Request Message not valid

120 - Invalid Phone Number

4.20. Check Name Server

It can be used only for the Greek Registry Checks if a nameservers exists at Registry

```
a) Json Request
{
    "request": {
        "apiKey": "12345",
        "do": "checknameserver",
        "name_server": "dns1.papaki.gr",
        "registry": "gr"
    }
}
```

b) **Parameters**:

do Value: checknameserver

apiKey

a valid API Key for your user account

name_server registry

Value:"gr": for gr Registry

d) Response codes

1000 - Command Completed Succesfully

4000 - Not validated: ApiKey Missing

4000 - Not validated. Invalid Credentials or No permission from IP:...

1100 - Request Message not valid

201 - Invalid Registry

4.21. Get domain Information Η συνάρτηση αυτή επιστρέφει πληροφορίες για το όνομα χώρου

a) <u>Json Request</u>

```
{
  "request": {
    "type": "getDomainInfo",
    "apiKey": "myapikey",
    "domainname": "testdomain.gr"
```

```
}
}
```

type Value: getDomainInfo

apiKey a valid API Key for your user

account

domainname in your

account at papaki.gr

```
c) Response
{
  "response": {
  "code": "1000",
  "message": "Command Completed Successfully",
  "CreationDate": "2009-06-23",
  "expirationDate": "2013-06-22",
  "RegistryStatus": {
  "StatusArray": [
      "ok"
  ]
  },
  "domainname": "testdomain.gr",
  "password": "myepppassword",
  "uniqueid": "d13456"
  }
}
```

d) Response codes

1000 - Command Completed Succesfully

4000 - Not validated: ApiKey Missing

4000 - Not validated. Invalid Credentials or No permission from IP:...

1100 - Request Message not valid

120 - Validation Error

1300 - Domain Changed Registrar

1200 - Getting Info Error

e) Response notes

- CreationDate, expirationDate format: yyyy-dd-mm
- A Password is the epp password used for domain transfers
- A RegistryStatus: ok, pendingCreate (under EETT approvement), pendingDelete (quarantinte), inactive (not nameservers linked). A domain can have more than one statuses, for example "ok" and "inactive"

4.22. Multi Modify Nameserver

```
a) JSON request
```

b) **Parameters:**

do Τιμή: modifynsmulti

apiKey a valid API Key for your user

account

name_server

ipsarray Array with ips

```
c) Response
{
"response": {
"code": "1000",
"message": "Command Completed Successfully"
}
```

}

4.23. Enable Webhosting

a) **JSON request**

```
"request": {
    "do": "createhosting",

5. Extras and Specifications

5.1. Extras

Country list for EU

To be eligible to register a .EU domain, you must have residency in one of the countries/regions designated by EURid, the .EU registry.

GB = United Kingdom

AT = Austria

AX = Aland Islands

BE = Belgium

CY = Cyprus

CZ = Czech Republic

DE = Germany

DK = Denmark

EE = Estonia

ES = Spain

FI = Finland

FR = France

GI = Gibraltar

GF = French Guyana

GP = Guadeloupe

GR = Greece

HU = Hungary

IE = Ireland

IT = Italy

LT = Lithuania

LU = Luxembourg

LV = Latvia

MQ = Martinique

MT = Malta (including Gozo and Comino)

NL = Netherlands

PL = Poland

PT = Portugal

RE = Reunion

SE = Sweden

SI = Slovenia

SK = Slovakia

5.2 Extra Attributes

.ASIA extra_attributes

The extra_attributes associative array contains Charter Eligibility Declaration (CED) information to satisfy regional presence requirements of the .ASIA registry, including the stated purpose of the domain, the category of the registrant and the country code validator.

Parameters within the extra_attributes associative array are described below.

Parameter Name	Value	domainregister	changeregistrar
contact_ type	The contact that is the designated CED Contact. Allowed values are owner, admin, tech, or billing.	Required	Required
id_number	Identification number or code of reference for the specified id_type , for example, a passport number.	Required	Required
id_type	The type of ID used to validate the CED information. Allowed values are passport, certificate (of Incorporation or business registration), legislation (act, decree or legislation chartering the formation of an entity), societyRegistry, politicalPartyRegistry, or	Required	Required

other.

Note: If you specify other, you must also

submit the id_type_info parameter.

id_type_info

locality_ country

County code from the Required

list of

qualifying countries.

For a

definition of the geographical boundaries of

the

Asia/Australia/Pacific region, see http://www.icann.org/montreal/geo-regions-topic.htm

.US extra_attributes

The $\textbf{extra_attributes}$ associative array contains Nexus information for .US domains, to

satisfy the American presence requirements of the registry. Parameters within the nexus associative array are described below.

Parameter Name app_purpose	Value A description of the domain's application purpose: • P1—Business use for profit. • P2—Non-profit business, club, association, religious organization, and so on. • P3—Personal use. • P4—Education purposes. • P5—Government	domainregister Required	changeregistrar Required
category	purposes. A description of the domain's nexus category: • C11—A citizen of the U.S. or any of its territories. • C12—A permanent resident of the U.S. or any of its territories. • C21—An organization	Required	Required

incorporated within the U.S.

- C31—An entity

that

regularly engages in lawful activities in

the U.S.

• **C32**—An entity

that

has an office or other facility U.S.

validator

The domain owner's Required if Required if country of category = citizenship. C31 or C31 or Value must be a valid C32 Required if Required if Category = C31 or C31 or C32

twoletter country code.

.IT extra_attributes

The **extra_attributes** associative array contains information to satisfy the regional presence requirements of the registry.

Parameters within the **extra_attributes** associative array are described below.

Parameter Name	Value	domainregister	changeregistrar
entity_type	The legal entity type of registrant. Allowed values are: • 1—Italian and foreign natural persons • 2—Companies/one man companies • 3—Freelance workers/professionals • 4—Non-profit	Required	Required
	p		

organizations

- **5**—Public organizations
- **6**—Other subjects
- **7**—Foreigners who

match 2-6

nationality_ code The 2-digit ISO

3166-1

code that identifies

the

Registrant's nationality.

If **entity_type** = **1**, nationality or owner's country or both must

be an

EU country.

If entity_type = 2-

6, this

value must be IT.

If entity_type = 7,

this

value must match

owner's

country and must be

an EU

country other than

IT.

Note: Be sure to use

capital letters.

registrant_type	The entity type of registrant. Allowed values are individual and organization.	Required	Required

.RU extra_attributes

The registrant_extra_info associative array contains information to satisfy requirements of the registry.

Parameters within the **extra_attributes** associative array are described below.

Parameter Name	Value	domainregister	changeregistrar
date_of_birth	The registrant's date of birth in the format YYYY-MM-DD.	Required	Required
id_card_authority	The name of the	Required	Required

issuer.

id_card_issue_date The date Required Required

that the ID card was issued, in the format *YYYY-MM-DD*.

id_card_number The number Required Required

of the individual's identity card.

registrant_type The entity Required Required

type of registrant. Allowed values are **individual** and

organization.

place_of_birth The city in Required Required

which the individual was born.

.AU extra_attributes

The **extra_attributes** associative array contains information about specific requirements that registrants of .AU domains must meet.

Parameters within the **extra_attributes** associative array are described below.

Parameter Name Value

domainregist changeregistr

er ar

eligibility_id The identifier of the Required Required

eligibility document.

Important: This number will be verified, and if you submit an incorrect number, the registration will fail.

eligibility_id_type

The Eligibility ID type. The allowed values depend on the **eligibility_type** specified.

Allowed value for **Charity**

is **ABN**.

Allowed value for **Club** is

ABN.

Allowed values for

Incorporated
Association are ACT BN,
NSW BN, NT BN, QLD
BN, SA BN, TAS BN, VIC

BN, and WA BN.

Allowed values for **Nonprofit**

Organization are
ABN, ACT BN, ACN,
NSW BN, NT BN, QLD
BN, SA BN, TAS BN, VIC
BN, WA BN, and OTHER.
Allowed value for Trade

Union is OTHER.

Allowed value for

Company is ACN.

Allowed value for

Registered Business is **OTHER**.

Allowed value for **Sole**

Trader is **ABN**. Allowed value for

Trademark Owner is

TM.

Allowed value for **Pending Trademark Owner** is

TM.

Allowed value for

Partnership is **ABN**.

eligibility_name

The name on the eligibility ID document.

Required

Required

Required

policy_reason

Indicates the reason the registrant is entitled to the

domain name.

Allowed values are:

1—The name exactly matches the acronym or abbreviation of the registrant's company or trading name, organization or association name, or trademark.

2—The name is connected closely and substantially to the registrant. This is the default.

eligibility_type

The reason that the

registrant is eligible for the

domain name. The

eligibility_type must

correspond to the

eligibility_name. For

example, if the registrant

is using their company name to register the

domain, then their

eligibility_type is

Company. If they are

using their Registered

Business Name to register

the domain, then their

eligibility_type is

Registered Business,

even if they are also a

company.

Allowed values for

.ASN.AU and .ORG.AU

domains are:

- Charity
- · Club
- Incorporated

Association

Non-profit

Organization

Required

Required

Required

5.3 Asynchronous domains

Για συγκεκριμένα tlds η κατοχύρωση και η ανανέωση γίνονται ασύγχρονα μέσα σε ένα μικρό χρονικό διάστημα. Τα tlds που λειτουργούν με αυτό τον τρόπο είναι :

.co.il,.com.ar,.com.br,.com.hr,.com.lv,.com.pt,.com.ro,.com.ua,.cz,.dk,.fi,.lt,.lv, .no,.pt,.ro,.ru,.si

5.4 Cabe

Για συγκεκριμένα tlds η ανανέωση θα πρέπει να σταλεί έναν συγκεκριμένο αριθμό ημερών πριν τη λήξη του domain. Διαφορετικά δε θα μπορεί να ανανεωθεί το domain. Η συγκεκριμένη ιδιαιτερότητα αφορά τα tlds:

Tld	Ελάχιστος αριθμός ημερών ανανέωσης πριν τη λήξη ενός domain
